

The PSI Product Suite

THE PSI SUITE

The PSI product suite (Origen, AuditWare for Binderies, AuditWare for NDS, and DS Standard NDS Manager) helps NetWare administrators work *smarter*. The products in the PSI suite are integrated, providing more powerful capabilities when combined. Like DS Standard, you will find AuditWare and Origen are a MUST for any network administrator.

DS STANDARD -- POWERFUL DAILY NDS MANAGEMENT WITH A "SAFETY NET"

DS Standard NDS Manager is a Windows-based, off-line NDS management tool. Using DS Standard, network managers make changes to a back-end database, not the "live" network. With its powerful database capabilities, DS Standard reduces the time required to manage NDS, makes migrations as easy as drag-and-drop and with over 130,000 copies in distribution, DS Standard is the premier NDS management tool available today!

(NEW!) AUDITWARE FOR NDS -- YOUR TREE'S SECURITY GUARD

AuditWare for NDS is a Windows-based advanced NDS security analysis tool. Create a more secure and manageable NDS tree using capabilities such as baselining, security exception reporting, advanced searching and "stealth" reporting. AuditWare for NDS provides network managers with the ability to quickly analyze and document NDS trees without generating excessive network traffic or impacting the "live" network.

AUDITWARE FOR BINDERIES -- A "BEST OF TIMES AWARD" WINNER

If you need powerful reporting capabilities, AuditWare is a great solution. It is a LAN TIMES "Best of Times Award" winner. AuditWare can combine the bindery details of multiple servers into a single, consolidated view. Use AuditWare to determine the number of duplicate users, dangerous users, garbage objects, etc. Unlike other reporting tools, AuditWare combines PSI's off-line architecture with exception reporting, a WYSIWYG Windows GUI, true multi-server support, and Origen and DS Standard integration into one tool.

ORIGEN FOR BINDERIES -- THE BINDERY ADMINISTRATOR'S SWISS ARMY KNIFE

If you need an easy and efficient way to manage your NetWare bindery-based servers, Origen is the tool for you. Origen is a tool for managing NetWare server binderies. Think of it as a **more powerful, off-line Syscon and Pconsole** tool rolled into one. While working off-line with Origen, network administrators can template server installations, consolidate servers by merging objects, apply naming conventions with powerful database commands (e.g. global search and replace), define entire print configurations from print jobs through print servers, move users from server to server and perform pre-configuration analysis through detailed reports.

HOW TO CONTACT PSI

Contact PSI today for more information at:

Preferred Systems, Inc.

250 Captain Thomas Boulevard

West Haven, CT 06516 U.S.A.

Phone: (800) 222-7638 / (203) 937-3000

Fax: (203) 937-3032

BBS: (203) 937-3019

Compuserve: 73564,354 or GO NVENB (Preferred Systems section)

Internet Mail: sysop@prefsys.usa.com
